FRAMEWORK FOR THE FINAL PROJECT — 3rd BGU

1. Project Title

VOLUNTEEN ESCOLAR: A Web Platform to Promote and Organize Student Participation in School Activities

2. Problem Statement

In some educational institutions, students do not actively participate in school activities because they do not know about upcoming events, lack opportunities to share their ideas, or have difficulties finding information about school activities.

Students, teachers, and the student council are affected by this problem. Traditional methods, such as posters and informal announcements, may not reach everyone or provide an organized way to register for events and submit proposals.

VolunTeen Escolar aims to solve this problem by creating a website that centralizes school information and encourages students to participate in their school community.

3. Justification

VolunTeen Escolar is necessary because it will make school activities more accessible and improve communication between students and the student council.

Its innovative aspect is the integration of several participation tools into one website. Students will be able to check upcoming events, register for

activities, submit proposals, participate in polls, and view school achievements.

The platform will encourage teamwork, responsibility, democratic participation, and student involvement in social, cultural, environmental, and educational activities.

4. General Objective

To develop and implement VolunTeen Escolar, a web platform that promotes student participation by providing information about school activities, organizing event registration, and allowing students to submit proposals and participate in polls.

5. Specific Objectives

- Identify the main difficulties students face when participating in school activities.
- Design an accessible and user-friendly web platform.
- Program the main functions, including event registration, polls, and proposal submissions.
- Improve communication between students and the student council.
- Test the prototype with students and collect their feedback.
- Evaluate the platform’s usefulness through surveys and participation data.

6. Theoretical Framework

6.1. Artificial Intelligence

Artificial Intelligence (AI) allows computer systems to perform tasks that usually require human intelligence. In future versions, AI could help classify student proposals or recommend activities based on general interests.

6.2. Machine Learning

Machine Learning is a branch of AI that identifies patterns in data. It could be used in future versions to analyze participation trends and identify students' preferred activities.

6.3. Programming

Programming involves writing instructions that make a website function. VolunTeen Escolar will use HTML, CSS, and JavaScript to create its structure, design, and interactive features.

6.4. Software Development

Software development includes planning, designing, programming, testing, and improving a digital product. These stages will guide the creation of the platform.

6.5. Databases

Databases organize and store information. They could be used to manage activities, registrations, proposals, polls, and announcements.

6.6. User Interfaces

The user interface is the part of the website that users interact with. VolunTeen Escolar will have a clear design that allows students to find information and use its functions easily.

6.7. Cybersecurity

Cybersecurity protects systems and personal information. The platform should collect only necessary data and restrict access to administrative functions.

6.8. Related Technologies

The project will use HTML, CSS, JavaScript, a code editor, a web browser, and, if necessary, a database and hosting service.

7. Methodology

7.1. Research Approach

The project will use a mixed-methods approach, combining quantitative survey results with qualitative feedback from students and school representatives.

7.2. Data Collection

Information will be collected to identify students' interests, preferred activities, and difficulties participating in school events.

7.3. Interviews and Surveys

Students will complete an initial survey about their participation and expectations. If possible, a student council representative or teacher will be interviewed. A second survey will evaluate the prototype after testing.

7.4. System Design

The website will include an activity calendar, event registration, a suggestion box, student voting, participation recognition, and student council news.

7.5. Programming

HTML, CSS, and JavaScript will be used to create the website and implement its main functions.

7.6. Testing

A group of students will test the platform by consulting activities, registering for events, submitting proposals, and participating in polls.

7.7. Evaluation

Survey results, user feedback, and available participation data will be analyzed to determine whether the platform is useful and easy to use.

8. System Design

8.1. Architecture

The platform will work through a web browser. Students will access information and participate in activities, while authorized student council representatives will manage announcements and event information.

8.2. Flowchart

1. The user opens the website.
2. The home page displays activities and announcements.
3. The user selects a section.
4. The user consults information or completes an action.
5. The system validates the information.
6. The system records the action when the corresponding function is implemented.

7. The user returns to the home page or selects another section.

8.3. Database

The proposed database may contain:

- Users and access roles.
- Activities and event dates.
- Event registrations.
- Student proposals.
- Polls and voting results.
- Student council announcements.
- Participation achievements.

8.4. User Interface

The website will have a simple, organized, and student-friendly design. Its main sections will be Home, Activity Calendar, Event Registration, Suggestion Box, Student Voting, Participation Recognition, and Student Council News.

8.5. AI Model

The initial prototype will not require an AI model. However, future versions could incorporate AI to

classify proposals or recommend activities. Any AI feature would be tested before implementation.

8.6. Main Functions

1. Activity Calendar: Displays upcoming events and important dates.
2. Event Registration: Allows students to register for school activities.
3. Suggestion Box: Enables students to submit ideas and propose new activities.
4. Student Voting: Allows students to vote on activities and school proposals.
5. Participation Recognition: Shows completed activities and achievements.
6. Student Council News: Publishes announcements, campaigns, and event results.

9. Development

9.1. Technologies Used

The project will use HTML, CSS, JavaScript, a code editor, and a web browser. A database and hosting service may also be incorporated.

9.2. Programming Languages

HTML will structure the website, CSS will define its appearance, and JavaScript will provide interactive functions.

9.3. AI Tools

AI tools may assist with programming explanations, error correction, and design ideas. AI integration into the website will remain optional and may be considered for future improvements.

9.4. Development Process

The development process will include researching student needs, designing the interface, programming the functions, testing the website, correcting errors, collecting feedback, and evaluating the results.

10. Prototype

The prototype will be a functional website called VolunTeen Escolar. It will provide a central space where students can consult activities, register for events, submit proposals, participate in polls, and read student council announcements.

The prototype will be presented to a group of students who will test its main functions. Their

feedback will help identify improvements and determine whether the platform responds to their needs.

11. Results

11.1. What the Prototype Achieved

The project will evaluate whether the website successfully organizes school information, facilitates event registration, receives student proposals, and supports participation through polls and announcements.

11.2. Test Results

Students will complete practical tasks using the website. Their performance and any errors will be recorded and analyzed.

11.3. User Feedback

Students will answer a survey about the website's design, accessibility, usefulness, and functions. Their opinions will help evaluate the prototype.

11.4. Problems Detected and Solved

Possible problems include navigation difficulties, form errors, duplicate registrations, and display

issues. The final report will describe the problems actually identified and the solutions implemented during testing.

12. Conclusions

The project will determine whether VolunTeen Escolar achieves its objective of promoting student participation through a web platform.

The conclusions will be based on the functions implemented, testing results, and student feedback. The project is expected to improve access to school information, facilitate activity organization, and encourage responsibility, teamwork, and democratic participation.

Final conclusions will be written after analyzing the actual results obtained during the pilot test.

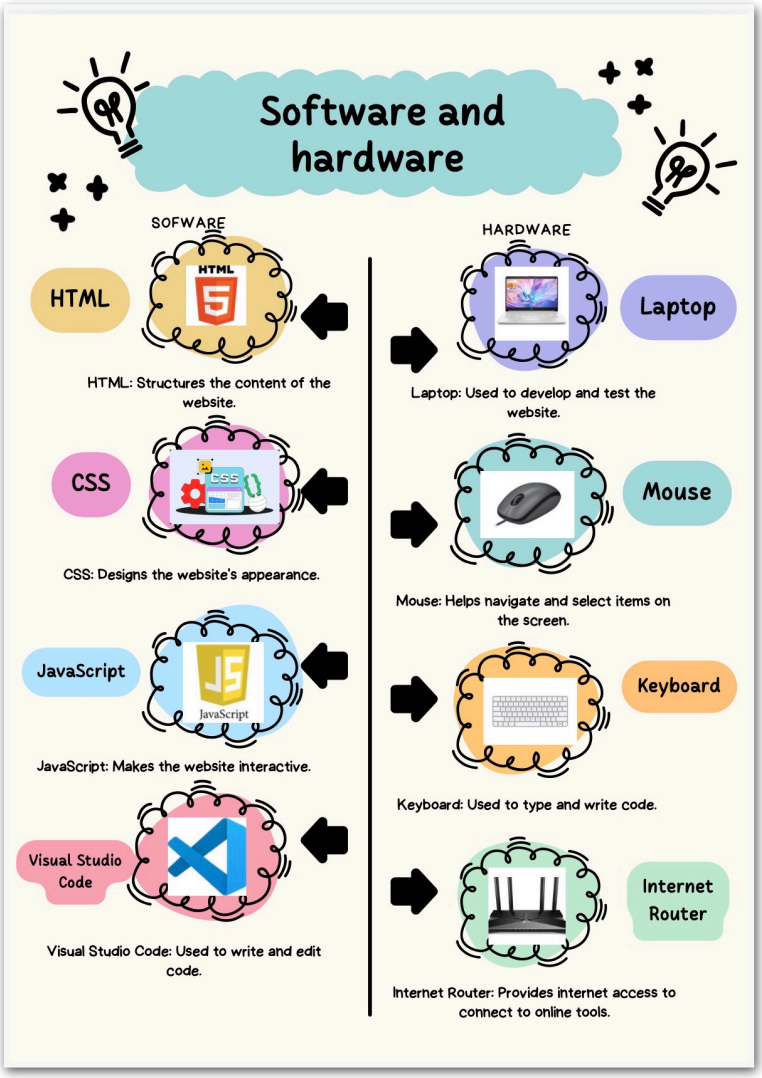

13. Recommendations

- Add secure student accounts and administrative access.
- Connect a database to manage information more efficiently.
- Include reminders about upcoming activities.
- Add participation statistics and activity reports.

- Incorporate AI tools in future versions if necessary.
- Improve accessibility and mobile compatibility.
- Conduct additional tests with more students.
- Protect personal information and establish rules for submitted proposals.

How VolunTeen help in our institution:

1. The Problem at Eight Academy

At Eight Academy, student participation in school activities can be affected by poor organization, limited communication, and difficulties sharing information about events. Students may not know when activities take place, how to register, or how to propose new ideas. The student council may also find it difficult to organize registrations, collect suggestions, and coordinate activities using different communication methods.

These problems can lead to lower student participation, confusion, and missed opportunities to get involved in school life.

2. How VolunTeen Escolar Solves These Problems

VolunTeen Escolar provides a centralized website where students, teachers, and the student council can access school activity information in one place.

- **Poor communication:** The news section publishes announcements, dates, and important updates so students can find information easily.
- **Disorganized activities:** The activity calendar displays events, schedules, locations, and descriptions in an organized way.
- **Difficult registration:** Students can register for activities online instead of depending only on messages or paper lists.
- **Limited student participation:** The suggestion box allows students to propose new activities and share ideas for improving Eight Academy.
- **Lack of student involvement in decisions:** Online polls allow students to vote for activities, campaigns, and school events.
- **Limited recognition:** The participation section highlights completed activities and achievements, encouraging more students to get involved.

3. How VolunTeen Makes Everything Easier

Before VolunTeen: Students may need to ask different people for information, search through messages, or wait for announcements. The student council may have to manage registrations and suggestions manually.

With VolunTeen: Students can access activities, register, submit ideas, and vote from one website. The student council can organize information in one place, review student suggestions, and plan activities based on students' interests.

4. Example at Eight Academy

Imagine that the student council wants to organize an Environmental Week.

1. The student council publishes the event dates and activities on VolunTeen.
2. Students check the calendar and register for activities such as recycling campaigns or school cleanups.
3. Students submit ideas through the suggestion box.
4. A poll allows students to vote for their preferred environmental activity.
5. The student council reviews registrations and suggestions to organize the event.
6. After the event, the platform publishes the results and recognizes student participation.

This process reduces confusion, saves organizational time, and gives students more opportunities to participate.

5. Expected Impact on Eight Academy

VolunTeen Escolar is expected to improve communication, make event organization easier, reduce dependence on scattered announcements, and encourage students to participate in school decisions.

Its effectiveness can be evaluated by comparing student survey responses before and after testing the platform, as well as measuring registrations, submitted proposals, and poll participation.

6. Conclusion

VolunTeen Escolar offers Eight Academy a practical digital solution to the challenges of student participation and poor organization. By bringing school activities and participation tools together, it makes information easier to access, simplifies the work of the student council, and gives students a more active role in their school community.

The goal is to make participation easier, better organized, and more accessible for everyone.

VOLUNTEEN ESCOLAR: Project Implementation and Future Development

1. Completed Project

VolunTeen Escolar is a functional web platform designed to improve student participation within the institution. It centralizes school activities, announcements, event registration, student proposals, online voting, and participation recognition in one place.

The platform helps the student council organize events more efficiently and allows students to become more involved in social, cultural, environmental, and educational activities.

2. How the Platform Works in the Institution

- **Student Council:** Publishes events, updates announcements, reviews proposals, and organizes activities.
- **Students:** Check the calendar, register for events, submit ideas, and vote in polls.
- **Teachers:** Support activities and encourage students to participate.
- **Institution:** Uses participation information to identify student interests and improve school activities.

3. How VolunTeen Escolar Can Evolve

Phase 1: Basic Platform

The website includes an activity calendar, event registration, a suggestion box, voting, announcements, and participation recognition. This version establishes the foundation for improving communication and organization.

Phase 2: Improved Organization

The platform incorporates student accounts, administrative access, a database, automatic registration confirmations, and notifications about upcoming activities. These improvements make information management more efficient and secure.

Phase 3: Participation Tracking

A dashboard displays participation statistics, popular activities, registrations, and achievements by class. Teachers and authorized staff could also record participation evaluations and recommendations, allowing students to review their progress through secure accounts.

Phase 4: Artificial Intelligence Integration

AI could help classify student proposals, identify popular activity categories, summarize feedback, and recommend activities based on general student interests. These features would support decision-making without replacing teachers or the student council.

Phase 5: Institutional Expansion

The platform could expand to include more grades, departments, and school campaigns. In the future, other educational institutions could adapt the system to organize their own activities and encourage student participation.

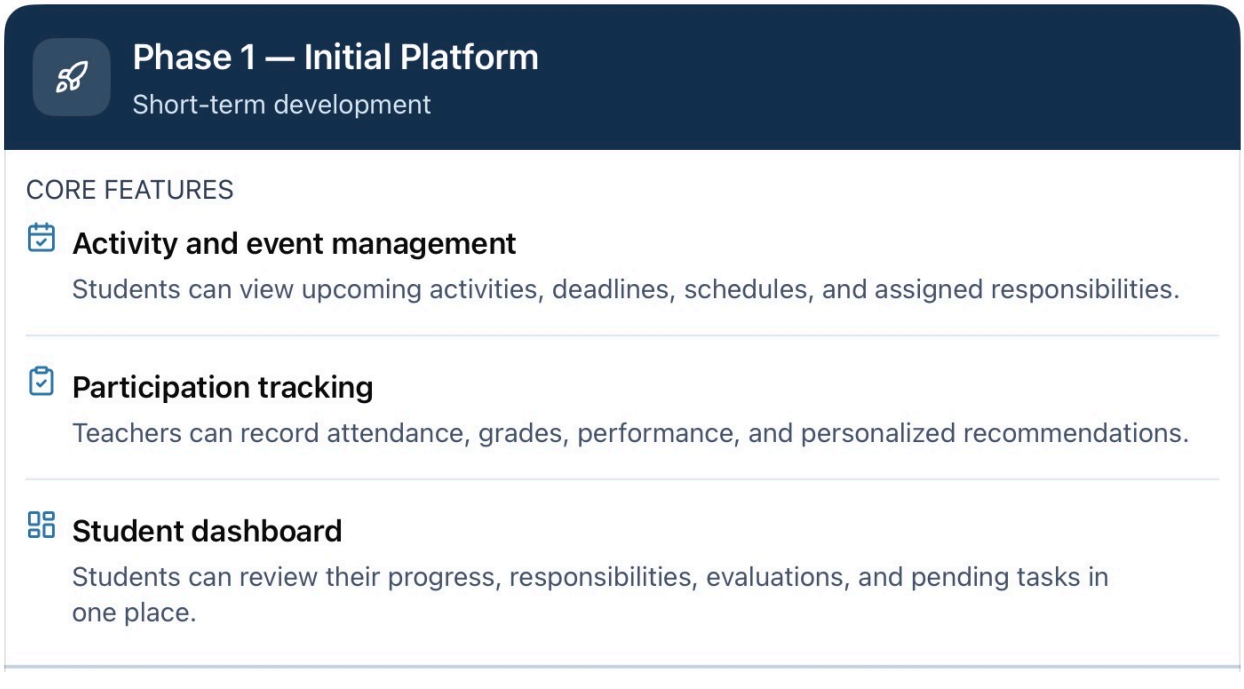

4. Expected Long-Term Impact

As VolunTeen Escolar evolves, it could reduce communication difficulties, improve event planning, increase student participation, and help the institution understand students' interests and needs.

The platform could also promote leadership, teamwork, democratic participation, and social responsibility by giving students an active role in improving their school community.

5. Conclusion

VolunTeen Escolar is more than an activity calendar; it is a digital tool that connects students, teachers, and the student council. Its development can begin with simple web functions and gradually incorporate databases, participation statistics, personalized accounts, and artificial intelligence.This evolution would allow the platform to respond to the institution's changing needs and become a long-term resource for building a more participative and collaborative school community.

Phase 2 — Enhanced Platform

Medium-term development

NEW CAPABILITIES

Phase 3 — Smart Ecosystem

Long-term development

ADVANCED FEATURES

AI-powered recommendations

Suggests activities based on student interests and identifies where additional guidance may be helpful.

Achievement and recognition system

Digital badges and certificates recognize responsibility, teamwork, leadership, and consistent participation.

Mobile application integration

A mobile-friendly experience or dedicated app for accessing activities, grades, notifications, and progress anywhere.
